## Problem

## 2010. Sasha the Young Grandmaster

Difficulty: 109
Time limit: 0.5 second
Memory limit: 64MB

Problem Author: folklore
Problem Source: Ural Regional School Programming Contest 2013

## Problem

## Input

The first line contains an integer $n$ that is the size of the side of the field $\left(1 \leq n \leq 10^{8}\right)$. The second line contains integers $x$ and $y$ that are the coordinates of the cell where Oleg puts the pieces $(1 \leq x, y \leq n)$.

## Problem

## Output

Output the number of cells that can be hit by king, by knight, by bishop, by rook, and by queen, correspondingly. Follow the format from the sample test.

## Problem

Sample

| input | output |
| :--- | :--- |
| 82 | King: 8 <br> Knight: 6 <br> Bishop: 9 <br> Rook: 14 <br> Queen: 23 |

## Chess Pieces

1. King
a. Chessboard size of 1

## K

b. In the Corner

## King

c. On the Edges

|  |  |  |  |  | $x$ | K | x |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | x | x | x |
| x | x |  |  |  |  |  |  |
| K | x |  |  |  |  |  |  |
| x | x |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  | x | x | x |  |
|  |  |  |  | x | K | x |  |

## King

d. In the Middle

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  | x | x | x |  |
|  |  |  |  | x | K | x |  |
|  |  |  |  | x | x | x |  |
| x | x | x |  |  |  |  |  |
| x | K | x |  |  |  |  |  |
| x | x | x |  |  |  |  |  |

## Chess Pieces

## 2. Knight

All possible moves of knight from a point if it is in the middle

## Knight

We can achieve all those possible coordinates by

$$
\begin{aligned}
& (x+2, y+1) \\
& (x+2, y-1) \\
& (x-2, y+1) \\
& (x-2, y-1) \\
& (x+1, y+2) \\
& (x+1, y-2) \\
& (x-1, y+2) \\
& (x-1, y-2)
\end{aligned}
$$

|  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | $x$ |  | $x$ |  |  |
|  | x |  |  |  | x |  |
|  |  |  | Kn |  |  |  |
|  | x |  |  |  | x |  |
|  |  | x |  | x |  |  |
|  |  |  |  |  |  |  |

## Knight

## Validity

So we check all those possible movement of a knight is in the chessboard or not. If one of the coordinates is less than 1 or more than the size of chessboard, that move is invalid. Thus, we exclude that move.

## Chess Pieces

## 3. Rook

a. Horizontal Movement

As you can see, it is always $n-1$ movement ( n is the size of the chessboard)

|  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{x}$ | $\mathbf{x}$ | $\mathbf{R}$ | x | x | x | x |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
| $\mathbf{x}$ | $\mathbf{x}$ | x | x | x | R | x |
|  |  |  |  |  |  |  |

## Rook

## b. Vertical Movement

As you can see, it is always $\mathrm{n}-1$ movement ( n is the size of the chessboard)

Thus, the total possible moves of a rook is $(n-1) \times 2$.

## Chess Pieces

## 4. Bishop

a. A pattern in a bishop movement

In Figure(4.1), no. of possible moves is $\mathrm{n}-1$. In Figure(4.2), no. of possible moves is $\mathrm{n}+1$.

But these tables are not big enough to observe the pattern between no. of possible moves and chessboard size at all so we will take a look at the bigger one.

## Bishop

b. Observing the bigger board

| $\mathrm{x}_{2}$ |  |  |  |  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |
|  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |  |
|  |  | $\mathrm{~B}_{1}$ | $\mathrm{~B}_{2}$ |  |  |  |
|  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |  |
| $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |  |
| $\mathrm{x}_{2}$ |  |  |  |  | $\mathrm{x}_{1}$ | $\mathrm{x}_{2}$ |

In Figure(4.3), no. of possible moves of $B_{1}$ is $n+3$ and no. of possible moves of $B_{2}$ is $n+5$.

## Bishop

By observing those patterns, you can see that the number of possible moves of a bishop is growing by +2 depending on the coordinate of it.

After some researches and according to the pattern, we can calculate all possible moves of a bishop with this formula.

If $x$ or $y$ is more than half of the size of chessboard $n$, then we set

$$
x=n-(x-1) \text { [if } x \text { is more] }
$$

$y=n-(y-1)$ [if $y$ is more]
Then
no. of all possible moves $=n+((\min (x, y) x 2)-3)$

## Chess Pieces

## 5. Queen

The Queen can move horizontally, vertically and diagonally.

Since the Rook can move horizontally and vertically and the Bishop can move diagonally, the number of possible moves of a Queen is the sum of those of a Rook and a Bishop.

$$
\mathrm{N}(\text { Queen })=\mathrm{N}(\text { Rook })+\mathrm{N}(\text { Bishop })
$$

## Result

## Test Cases

| 1 | 8 | 12 |
| :--- | :--- | :--- |
| 11 | 52 | 47 |
| King: 0 | King: 8 | King: 8 |
| Knight: 0 | Knight: 6 | Knight: 8 |
| Bishop: 0 | Bishop: 9 | Bishop: 17 |
| Rook: 0 | Rook: 14 | Rook: 22 |
| Queen: 0 | Queen: 23 | Queen: 39 |
