## Problem Description

Explanation of the Problem

## Problem Description

- This rubik's cube consists of four layers of size $4 \times 4$.

The layers look as follows.

- Each layer is made of glass and is absolutely transparent.
- The upper face of each layer is divided into 16 equal squares.
- Four of the squares of each layers are painted red, yellow, blue, or green in their respective positions

Look on Separate layers

- The cube is solved if it is in one of the following states (top view).

## Input

You are given four lines, each containing four integers, which describe the current state of the cube (top view). The numbers are in the range from 1 to 4; they correspond to the colors of the cube's squares. Different numbers denote different colors.

## Output

Output the minimum number of turns needed for solving the cube.

## Sample

|  |  |  | Input |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Output |  |  |  |  |
| 2 | 1 | 2 | 3 | 1 |  |
| 1 | 1 | 2 | 2 |  |  |
| 4 | 4 | 3 | 3 |  |  |
| 1 | 4 | 3 | 4 |  |  |

## 2 <br> Analysis

Understanding the Input and Output

| 2 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 1 | 1 | 2 | 2 |
| 4 | 4 | 3 | 3 |
| 1 | 4 | 3 | 4 |

|  |  |  | Input |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 2 |  | Output |  |  |  |
| 2 | 1 | 2 | 3 | 1 |  |
| 1 | 1 | 2 | 2 |  |  |
| 4 | 4 | 3 | 3 |  |  |
| 1 | 4 | 3 | 4 |  |  |

| 4 | 4 | 3 | 3 |

## Implementation

Problem Approach and Code Explanation

```
#include
    #include <iostream>
    #include <algorithm>
    using namespace std;
    Fint main()
    {
```

        int cube_initial[4][4];
        int cube_solve[4][4][2] \(=\{\{\{0,0\},\{0,3\},\{3,3\},\{3,0\}\}\)
                                    \(\{\{0,1\},\{1,3\},\{3,2\},\{2,0\}\}\)
                                    \(\{\{1,0\},\{0,2\},\{2,3\},\{3,1\}\}\)
                                    \(\{\{1,1\},\{1,2\},\{2,2\},\{2,1\}\}\}\)
        int turns[4];
        for (int \(i=0 ; i<4 ; i++\) )
            for (int \(\mathbf{j}=0 ; \mathrm{j}<4\); j++
                    cin >> cube_initial[i][j]
    memset(turns, c: 0, sizeof(turns))
    for (int i = 0; i < 4; i++)
        for (int \(j=0 ; j<4 ; j++\) )
            if (cube_initial[cube_solve[i][j][0]][cube_solve[i][j][1]] == 1)
            f
                    turns[( \(j+1)\) \% 4]++;
                    turns \([(j+2) \% 4]+=2\)
                    turns[(j + 3) \% 4]++
            \(\}\)
    C++
return 0
